

How the Internet Works

Circuit Switching

Phones vs Computers

Packet Switching – Paul Baran

- RAND Corporation (Research And Development) in 1959
- Worked on what would happen in case of nuclear attack
- If networks went down, you could use low-power radios

High Tech Heroes: Paul Baran

Packet Switched Network

Networking

7 Layer OSI Network Model

- Application
- Presentation
- Session
- Transport - TCP/UDP
- Network - IPv4/IPv6
- Data Link - Ethernet
- Physical - 100BASE-T

ENCAPSULATION

Encapsulation

Physical Layer

- Bits and bytes layer
- 10/100/1000 BASE-T
- No knowledge of the packet, just the destination

Data Link Layer

- Ethernet, frames, packets, congestion, etc.
- “Rules of the Road” for packets
 - Assures each location has an address
- Essentially the way data is routed across ethernet cables

Network Layer

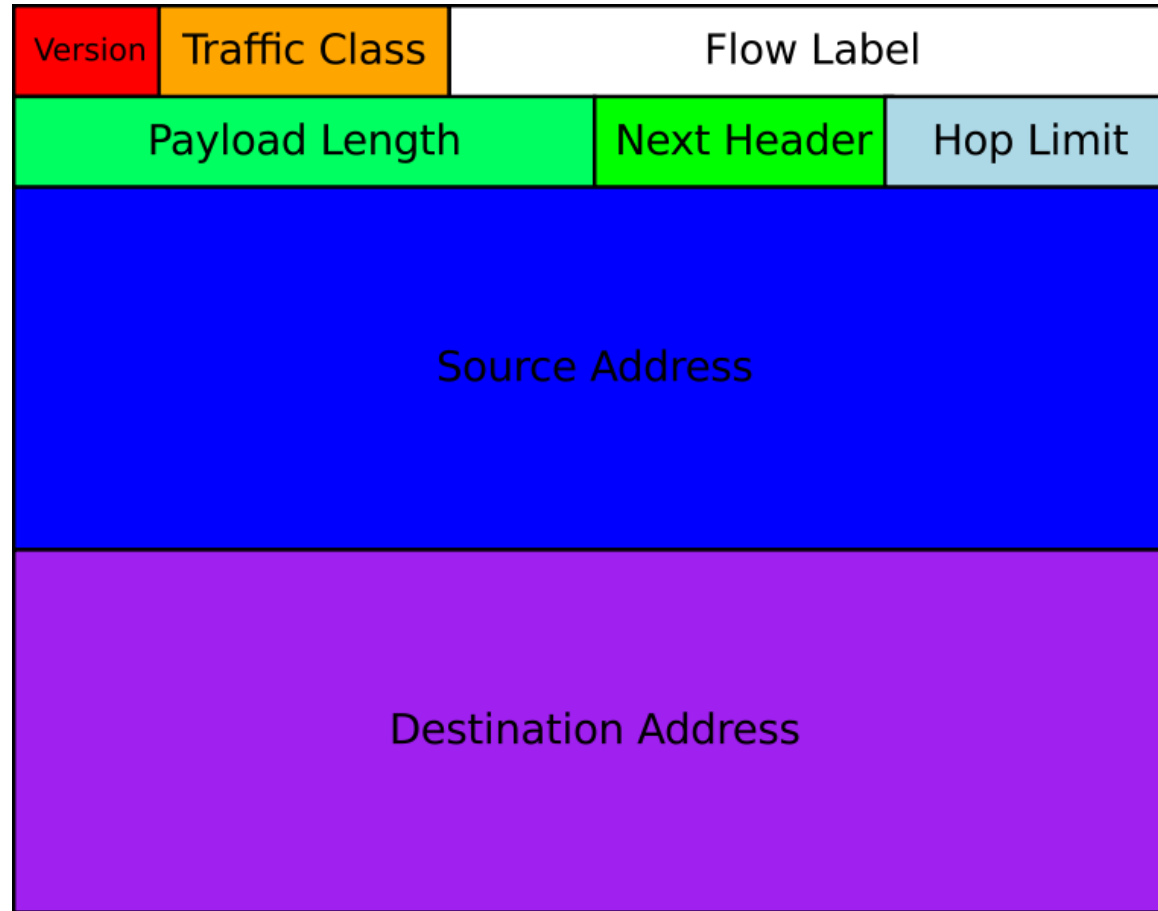

IPv4 Packet Structure

Version Info	Length
Packet ID	Flags & Offset
Protocol & TTL	Checksum
Source IP Address	
Destination IP Address	
Data...	

IPv4 vs. IPv6

- IPv4: 32 bit Addresses
 - $2^{32} = 4,294,967,296$
- IPv6: 128 bit Addresses
 - $2^{128} = 340,282,366,920,938,463,463,374,607,431,768,211,456$
 - Or 340 Undecillion addresses

Network Layer – IPv6

Transport Layer (TCP)

TCP Packet Structure

Source Port		Dest. Port	
Sequence Number			
Acknowledgement Number			
Options		Length	
Checksum		Urgent	
Data...			

Transport Layer – UDP

UDP Packet Structure	
Source Port	Dest. Port
Length	Checksum
Data...	

TCP vs UDP

TCP	UDP
Connection Oriented	Connectionless
Reliable	Unreliable
Acknowledge	No Acknowledge

Application Layer

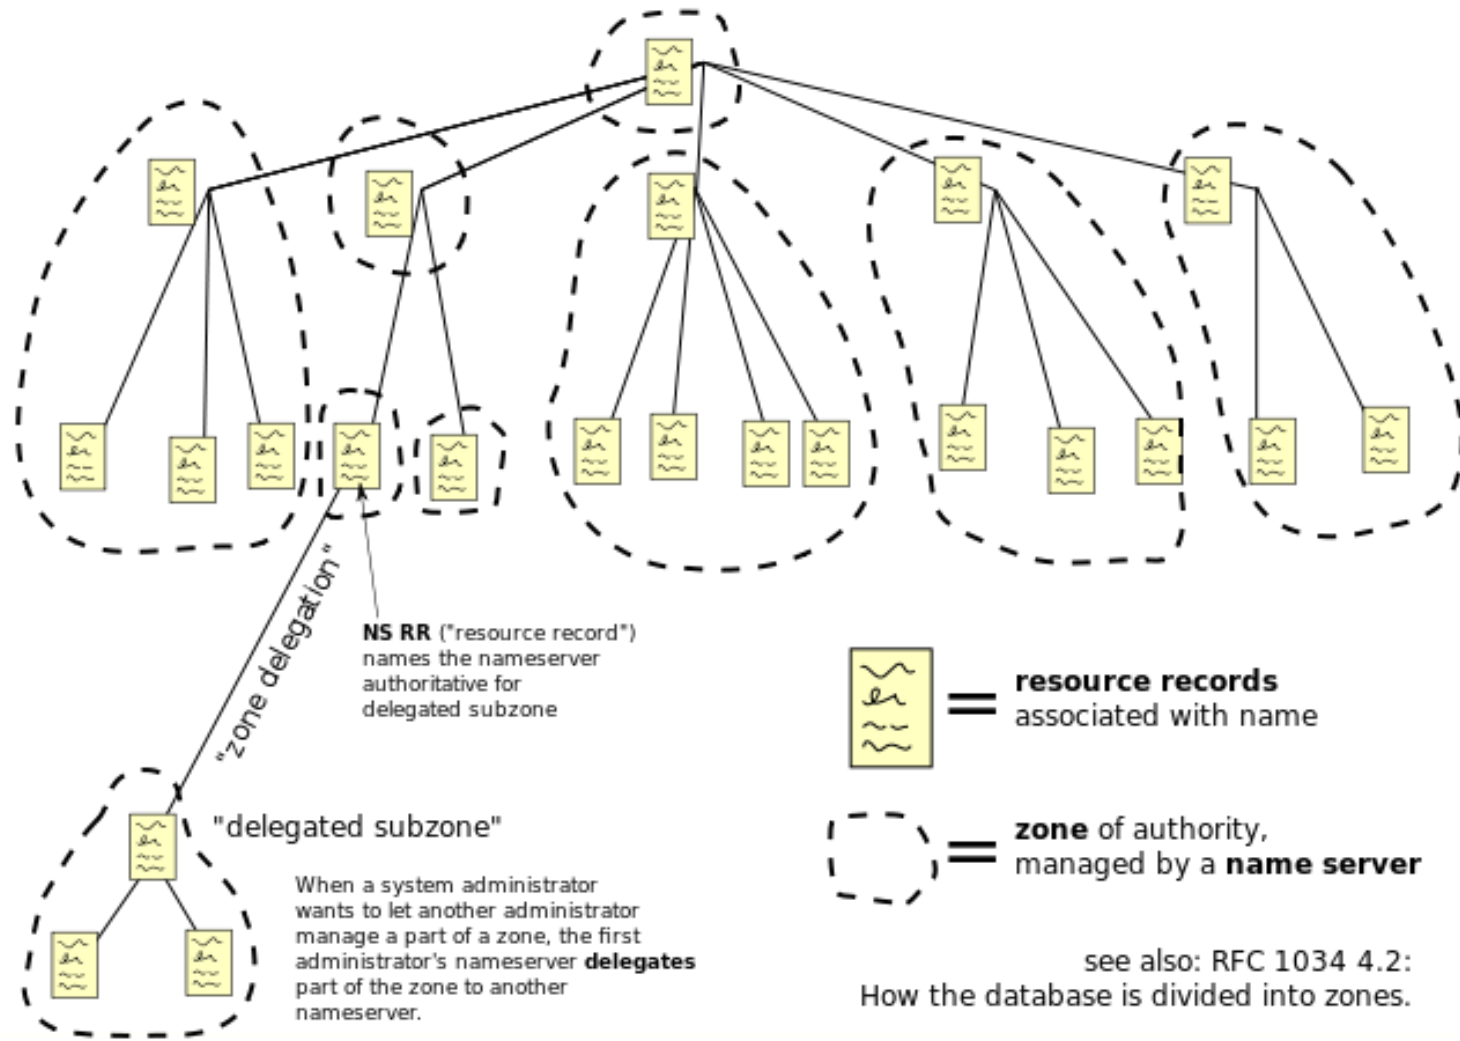

- POP/SMTP/IMAP - Email
- HTTP/FTP - World Wide Web
- DNS/DHCP - Network Setup
- SSH/RDP/Telnet - Connections

Domain Name System (DNS)

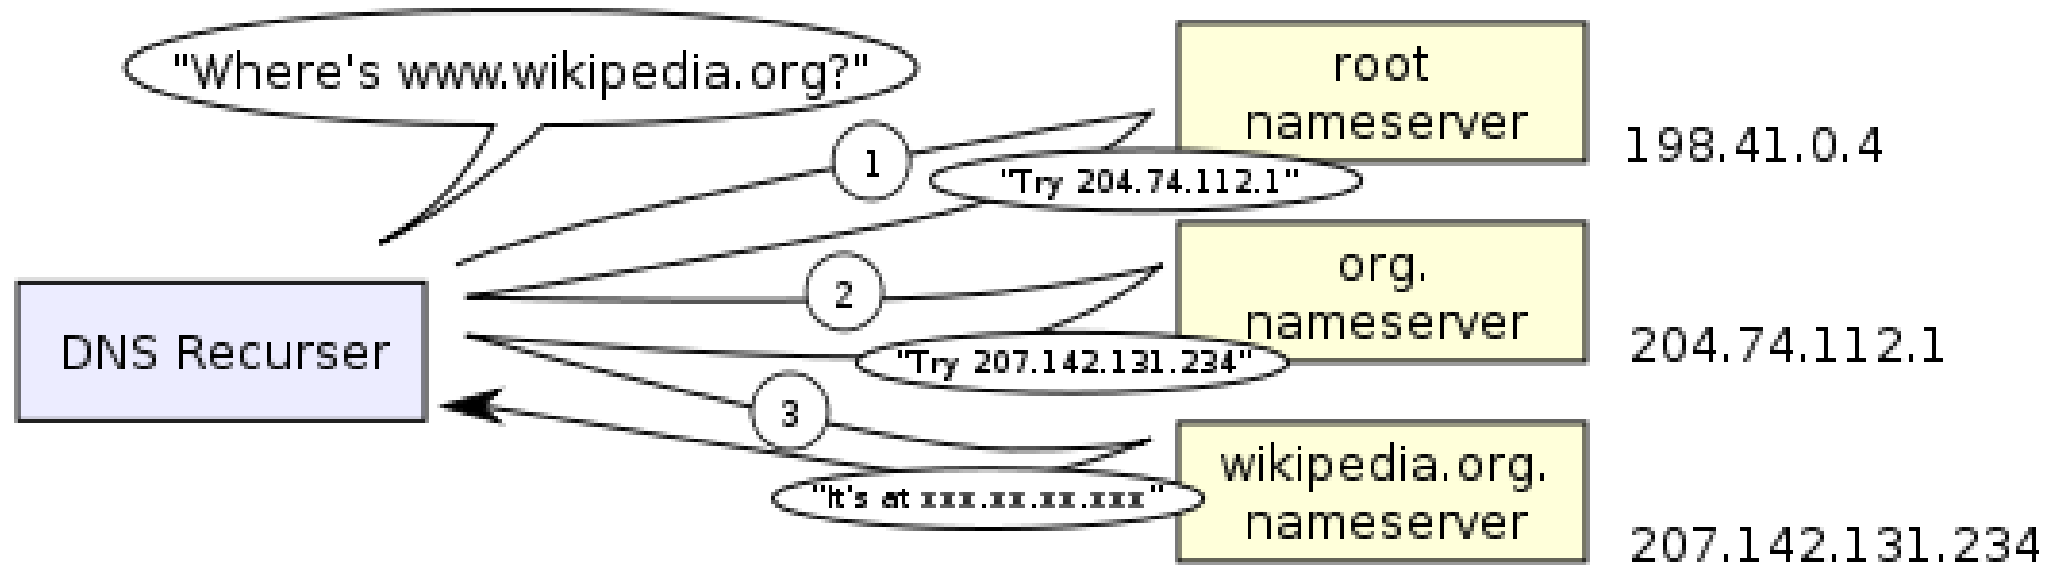

“Phonebook for the Internet”

- www.ksu.edu → 129.130.8.49
- www.google.com → 74.125.227.116
- www.ibm.com → 129.42.60.216
- www.yahoo.com → 98.138.253.109

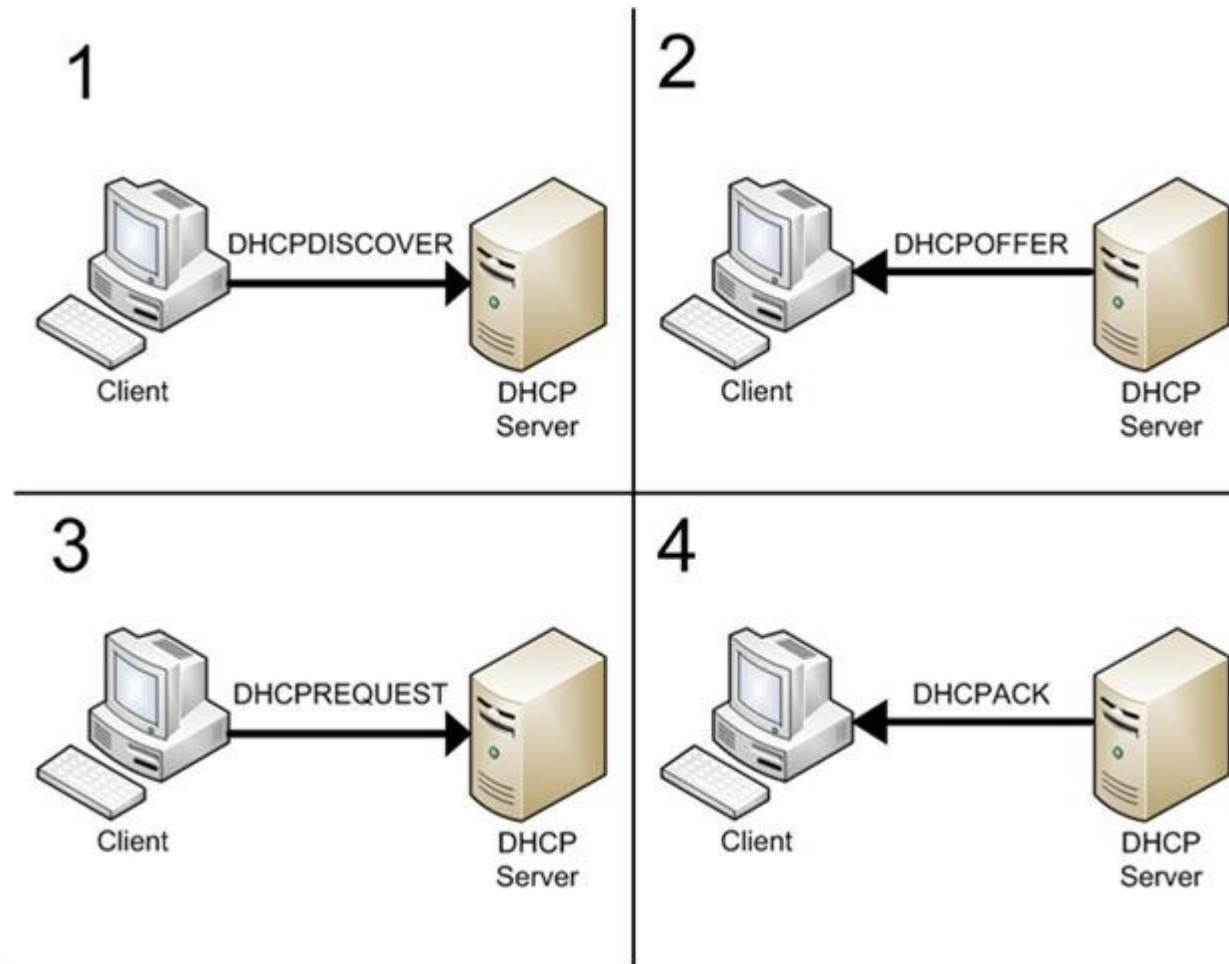

Domain Name Space

DNS Lookup

Dynamic Host Configuration Protocol (DHCP)

HyperText Transfer Protocol (HTTP)

- Developed by Tim Berners-Lee in the late 1980s
- Way to send and receive information through the web

```
josh@blackbox:~$ telnet en.wikipedia.org 80
Trying 208.80.152.2...
Connected to rr.pmtpa.wikimedia.org.

[Wikipedia](http://en.wikipedia.org)

HTTP Commands

- GET
- POST
- HEAD
- PUT
- DELETE

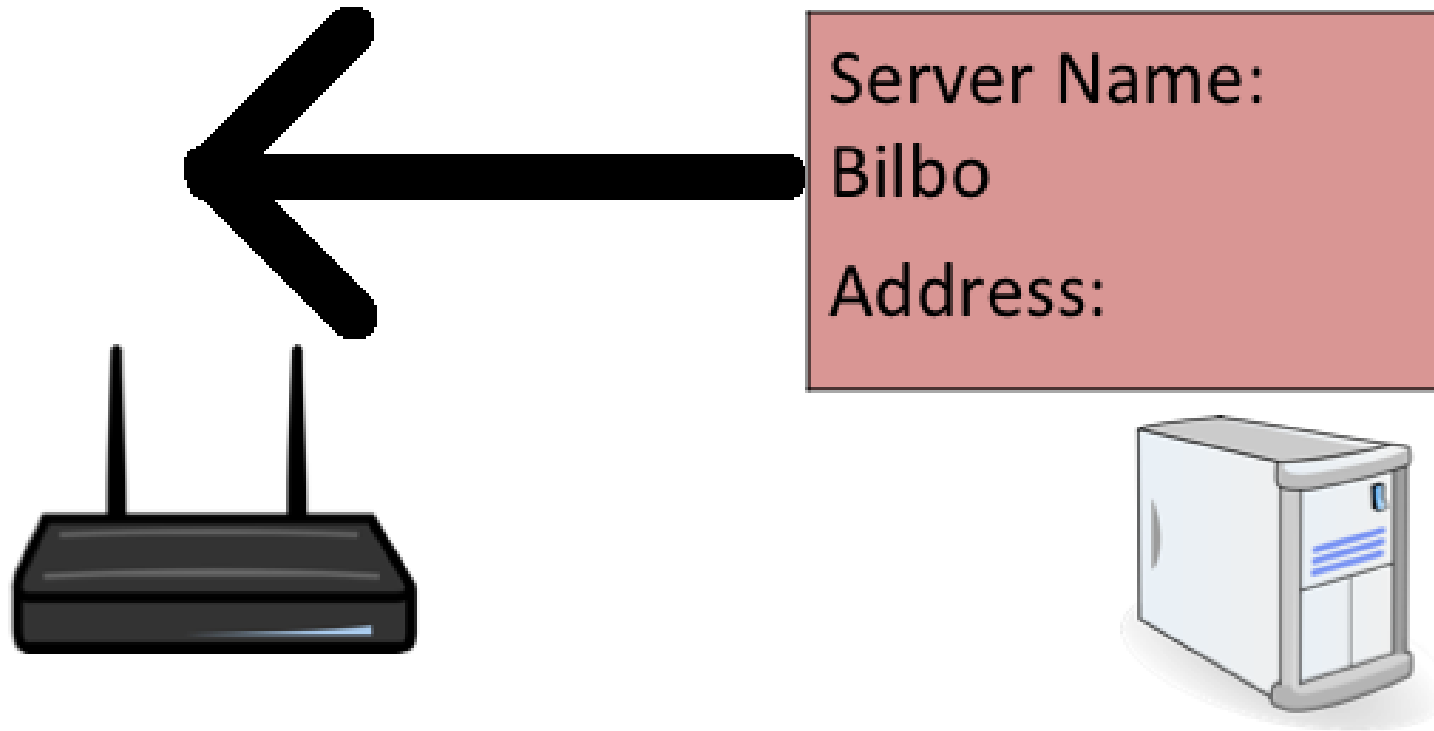

HTTP Status Codes

- 200 – OK
- 301 – Moved Permanently
- 403 – Forbidden
- 404 – Not Found
- 500 – Internal Server Error
- 503 – Service Unavailable

Packet Switching Activity

- Each server has a secret number
- Try to guess each server's secret number by playing the "Higher/Lower" game over HTTP
- Server with the most correct numbers when time runs out wins!

DHCP Request

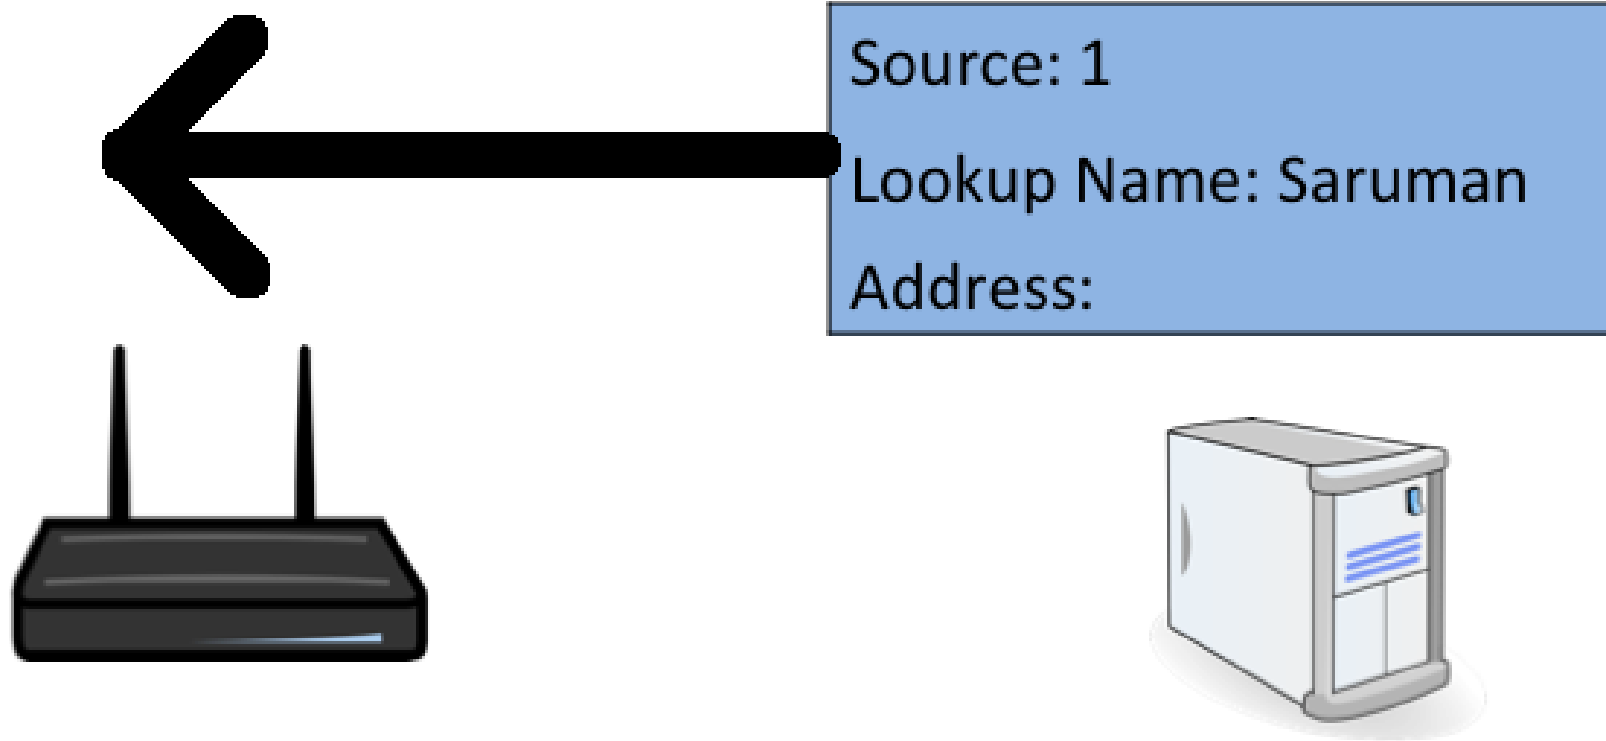

My Name is Bilbo!
I need an address

DHCP Response

My Address is 1!

DNS Lookup

I'd like to talk to
Saruman.

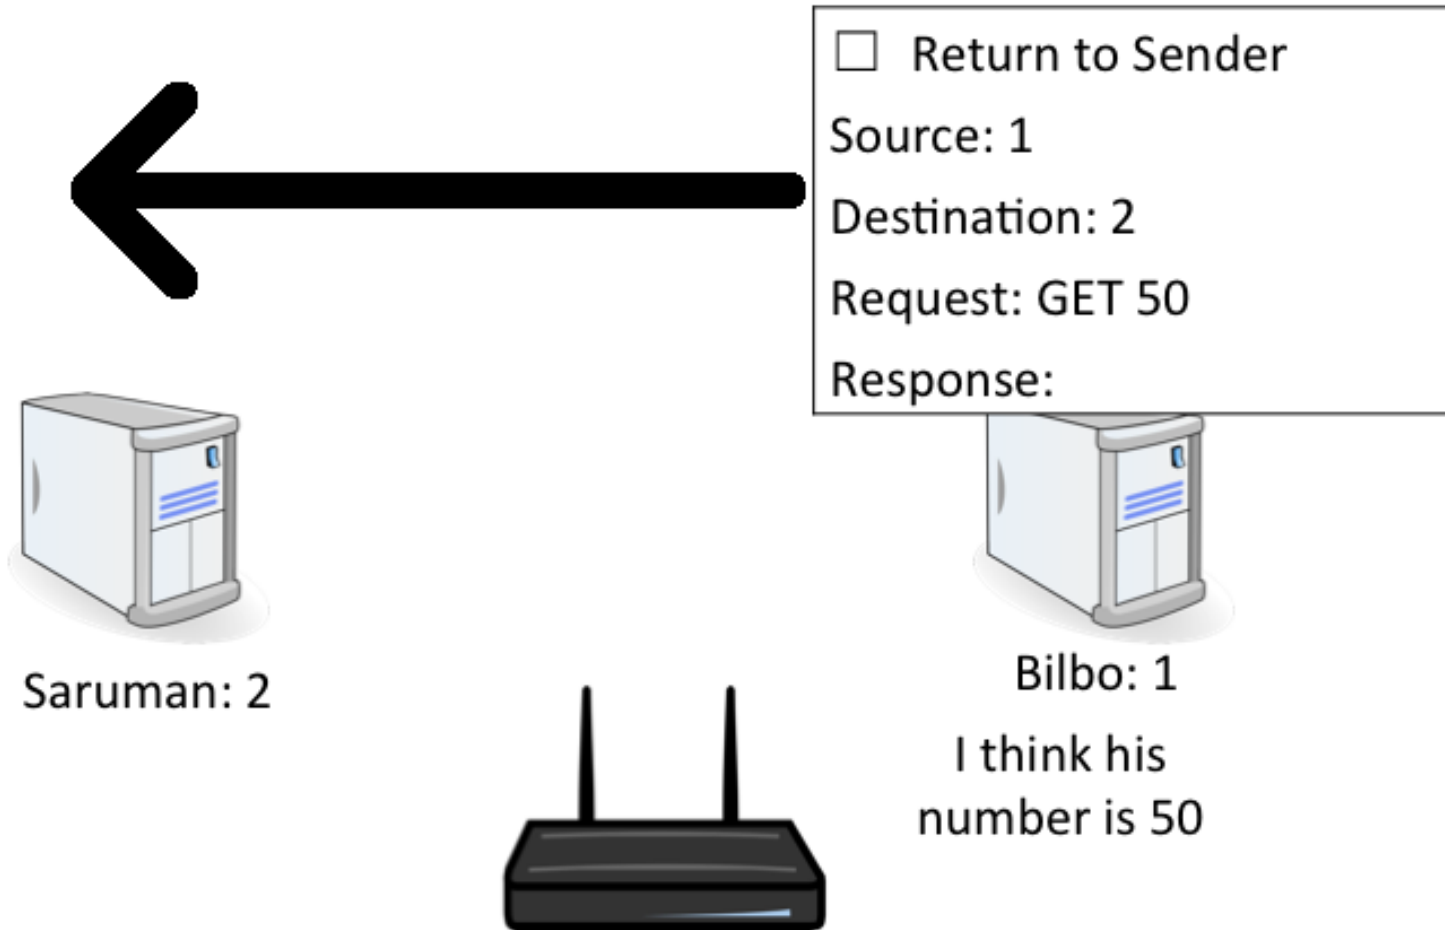

DNS Response

Source: 1
Lookup Name: Saruman
Address: 2

Saruman is at
Address 2!

HTTP Request

HTTP Response

Return to Sender
Source: 1
Destination: 2
Request: GET 50
Response: 310: Lower

Saruman: 2

Bilbo: 1

Nope! I'll have to
try a smaller
number!
